

## Task 5

---

In the **main** function, create an array of **ints** of any size and content. The program prints, in one line, all elements of the array, but each value which appears in it only once.

For example, if the array is

```
int[] arr = {2, 5, 3, 2, 1, 3, 6, 5, 3};
```

the program should print

```
2 5 3 1 6
```

Do not create any additional arrays or collections.

---

*Deadline: May 1 (inclusive)*

---

*Put your Java file(s), and only Java files, in a directory the name of which is your surname (without Polish or any other non-ASCII characters). Names of Java files are arbitrary, although of course they should correspond to names of classes you created. Zip the whole directory ("from above" — not just the files inside it). Then drop the zip file created in this way into folder "Tasks / Task\_XX" of the GAKKO system (where 'XX' is the task number).*
